DETAILED ACTION

1. Claims 1-to-17 are pending in the application.

Allowable Subject Matter

2. Claims 1-to-17 are allowable over the prior art of record because the cited reference do not contain the specified limitation of a DC canceler circuit comprising: a canceler input terminal adapted to receive a series of data input samples $x(n)$; a canceler output terminal adapted to provide a series of data output samples $y(n)$; a feedback path having: a feedback-path input terminal connected to the canceler output terminal; a feedback-path output terminal connected to the canceler input terminal; and sigma-delta modulator having a sigma-delta input terminal indirectly connected to the feedback-path input terminal and a sigma-delta output terminal connected to the feedback-path output terminal. The cited references also do not contain a sigma-delta loop having a tunable center frequency, the loop comprising: a data input terminal adapted to receive data $x(n)$; a tunable all-pass network having an all-pass network input terminal indirectly connected to the data input terminal and an all-pass network output terminal; a global feedback network connected between the all pass network output terminal and the all-pass network input terminal; and a local feedback network connected between the all-pass network output terminal and the all-pass network input terminals wherein the sigma delta loop is used in a control loop application.
